

# Convert to Permanent Bearing Protection

Rubber lip seals effectively perform for, on average, 1844 hours and consume 147 watts of power while they're sealing, according to industry sources. They groove the shaft and heat the bearing lube.

Inpro/Seal bearing isolators last for years and consume zero power. They don't damage the shaft or create heat. They don't wear out.

Bearing Isolators initially cost ten times that of a common rubber lip seal. The time for installation is about the same for either one. If lip seals were replaced when worn, they would be much more expensive than Bearing Isolators.

Take advantage of permanent bearing protection and enjoy enhanced equipment reliability in your facility. Just tell us what lip seal that you would like to replace. We can ship it out to you today.
